

ABSTRACT OF THE DISCLOSURE

A fuse-containing box is formed by placing a battery fuse and a bus bar connected to a terminal of the battery fuse on a supporting plate and by mounting a lower case and an upper case on the supporting plate. The fuse-containing box is mounted on an upper surface of a battery. A battery terminal to be fixedly fitted on a battery post projecting from the upper surface of the battery is fastened to the bus bar to electrically connect the battery fuse and the battery to each other. The lower case and the upper case are formed from a polypropylene-based resin. The supporting plate on which the battery fuse and the bus bar are mounted is formed from a heat-resistant nylon-based resin.
